

The Health Information Technology (HIT) Survey is administered to licensed independent practitioners (LIPs) in Rhode Island. These practitioners include physicians, physician assistants (PAs), and advanced practice registered nurses (APRNs).

The Practitioner Report is the tenth report about how practitioners are using computers to manage care for the patients they see and the fifth report to include APRNs and PAs. Increasing the use of computers in health care is supported by the Governor and others who want to improve how health care is provided in Rhode Island.

The practitioners included in this report are all licensed by the Rhode Island Department of Health. They are listed alphabetically by last name. The report includes information for three topics, or measures:

Measure 1: Presence of an Electronic Health Record (EHR)

Practitioners with computer systems, or EHRs, that track patients' health care information (Yes or No)

Measure 2: Use of e-Prescribing

Practitioners who send their patients' prescriptions to the pharmacy electronically, or "e-prescribe" (Yes or No)

Measure 3: Use of e-Prescribing for Controlled Substances

Practitioners who send their patients' controlled substance prescriptions to the pharmacy electronically, or "e-prescribe" (Yes or No)

Want to learn more?

- For more detailed information about these measures, see the Measure Specifications available at: <https://health.ri.gov/publications/annualreports/HealthInformationTechnologyMeasureSpecifications.pdf>
- For Detailed Reports on various HIT-related topics, visit: <https://health.ri.gov/publications/annualreports/HealthInformationTechnologyPhysicianSurveySummary.pdf>

The 2021 Practitioner Report includes the same set of measures as the 2019 report. Many of the practitioners in this report responded to the 2021 HIT Survey – but if they did not respond to the survey, they are reported as not using computers to care for their patients. This means they have "No" for Measures 1, 2, and 3. If you have questions about your practitioner's use of computers to manage your health care, please ask him or her.

This report is part of the Department of Health's Healthcare Quality Reporting Program. For information about the quality of care provided by facilities (such as home health agencies, hospitals, or nursing homes), visit: <http://www.health.ri.gov/healthcare/about/quality>.

Quick Facts about the 2021 HIT Survey

1. The 2021 HIT Survey is the eleventh administration of this survey. It is the tenth clinician-level report for doctors and the fifth public report for APRNs and PAs. The first year of data collection for doctors (2008) and for APRNs and PAs (2013) was a pilot effort that was not reported at the individual practitioner level.
2. This report reflects data for 4,278 physicians (1,556 survey respondents AND 2,722 non-respondents) and 2,290 APRNs and PAs (622 survey respondents and 1,668 non-respondents) with RI licenses who practice in RI, MA or CT (estimated based on the mailing addresses self-reported to the Department of Health during licensure); practitioners are excluded from Measure 3 if they do not or cannot e-prescribe in general. See the Summary Report for details, including the number of practitioners included in each measure.
3. See the **Measure Specifications**, published separately, for definitions of these measures and the **Summary Report**, also published separately, for information about overall performance.
4. If a practitioner does not respond to the HIT Survey, they are reported as not using HIT. In other words, they have "No" for Measures 1, 2, and 3.
5. EHR: Electronic Health Record sometimes called an Electronic Medical Record or EMR.
