

## Meadowlark, Inc. Pollution Risk Assessment Results

**Meadowlark, Inc.** (PWSID 2753326), formerly Meadowlark Mobile Home Park, is a community water system in Middletown that serves an estimated 174 residents through 73 connections. The water system consists of two drilled wells. Each well supplies water to two storage tanks prior to distribution. The last sanitary survey was April 21, 2000. For further information contact Mrs. Joseph Rideout at 132 Prospect Avenue, Middletown, RI 02842.

**The Source Protection Area** is a circle of radius 2,305 feet, or about 380 acres (see Figure 2 on back). The majority of the area consists of moderate to high density residential development and cropland. Institutional and developed recreational land uses are also located within the protection area (see Table 1 on back).

### Sample Summary (for the past five years)

- ▲ Bacteria have not been detected.
- ▲ Nitrate levels in groundwater are higher than half the US EPA standard for nitrate. This indicates significant contribution from human activity. A program to reduce nitrate may be helpful.
- ▲ There has been no detection of other regulated contaminants.

**This report** summarizes assessment results for this water system. The assessment identifies both known and potential sources of pollution occurring in the source protection area, and ranks the water source based on the likelihood of future contamination. The goal of this study is to help water suppliers, local officials, residents and consumers to learn more about source water protection. Because water quality is

Susceptibility To Contamination		
Low	√ Moderate	High

**Note:** A ranking of **MODERATE** means that the water could become contaminated one day. Protection efforts are important to assure continued water quality.

directly related to land use activities, everyone living or working in the source protection area has a role to play in keeping local water supplies safe.

### POLLUTION RISKS:

- ▲ High-intensity land uses, including residential and agricultural, are located near the wells.
- ▲ A road is near the wells, increasing the risk of hazardous material spills and road salt contamination.
- ▲ Underground storage tanks are located inside and just outside the source protection area.

### PROTECTION OPPORTUNITIES:

- ▲ The town can implement land use controls and programs to protect this source protection area from future high-intensity development.
- ▲ The town and supplier can encourage farmers, residents and institutions to use best management practices in handling potential contaminants.
- ▲ Residents can follow the guidelines on the back to reduce the impact of household contaminants.

### Source Water

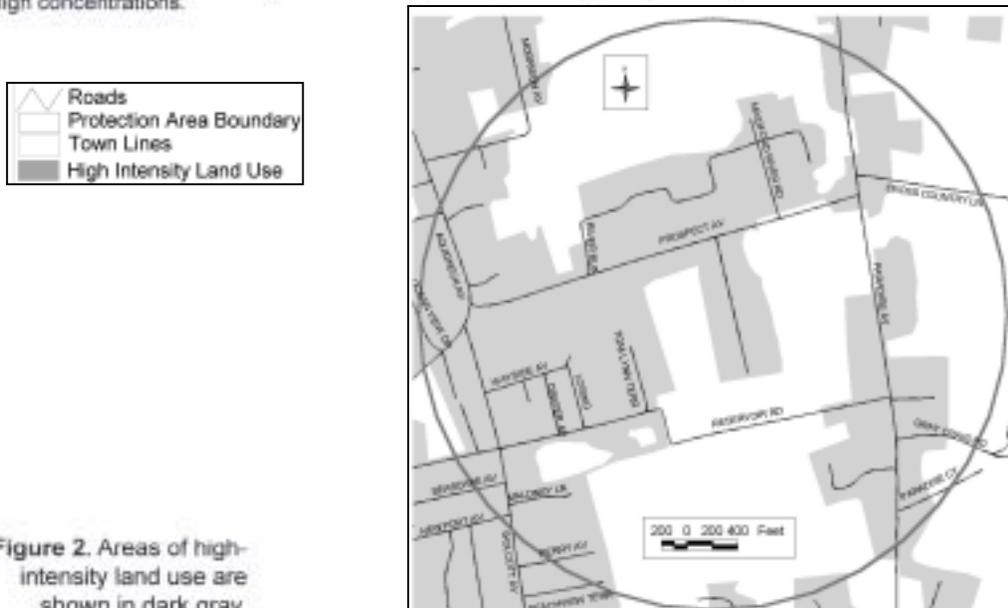

The focus of these assessments is on public drinking water supply "source" areas—the *wellhead protection area* that recharges a well or the *watershed* that drains to a surface water reservoir. Source water is untreated water from streams, lakes, reservoirs, or underground aquifers that is used to supply drinking water.

Source Water Assessments were conducted by the R.I. Department of Health in collaboration with the University of Rhode Island Cooperative Extension (URI CE) under the Rhode Island Source Water Assessment Program. This is part of a national initiative, established under the 1996 Amendments to the Federal Safe Drinking Water Act (SDWA), to foster more comprehensive protection of drinking water supplies at the local, state, and national levels.

**Table 1.** High-intensity land uses identified within the source water protection area that have the potential to contaminate drinking water.

Land Use Category	Associated Contaminants <sup>1</sup>	% of Protection Area
% Residential	Nutrients, Pathogens, VOCs, SOCs	46.9%
% Commercial, Industrial, Institutional	VOCs, SOCs, Solvents, Inorganics	6.6%
% Intensive Agriculture	Nutrients, Pathogens, VOCs, SOCs	29.9%

<sup>1</sup>Potential contaminants include nutrients (nitrates and phosphorus from fertilizers and human and animal waste), pathogens (bacteria, viruses, and other microorganisms that can cause disease); volatile organic compounds (VOCs) found in fuels and solvents; synthetic organic compounds (SOCs), such as pesticides and plastics; and inorganics, including metals and other substances that can harm human health in high concentrations.

**Figure 2.** Areas of high-intensity land use are shown in dark gray.

## What You Can Do To Protect Water Quality

### Public Water Suppliers:

- ▲ Implement all recommendations in the latest Sanitary Survey.
- ▲ Protect undeveloped land within the wellhead or watershed protection area. Work with municipal boards and government as needed to implement land use protection measures and education programs.
- ▲ Post signs alerting public to Wellhead or Watershed Protection Area.
- ▲ Inspect water supply and protection area regularly for potential pollution sources.

### Municipal Boards and Government:

- ▲ Develop a groundwater protection plan and ordinance and supporting protective zoning regulations, such as limits of paved surface areas within new developments.
- ▲ Incorporate groundwater and source water protection goals into the Comprehensive Plan.
- ▲ Implement on-site wastewater management or sewer maintenance plans and ordinances.
- ▲ Develop programs for land acquisition, conservation easements, or other critical lands protection.
- ▲ Adopt a stormwater management plan and ordinance.
- ▲ Establish a community education and outreach program that promotes residential pollution prevention and best management practices for the Public Works Department.

### Residents:

- ▲ Inspect septic systems annually and pump as needed.
- ▲ Replace/repair cesspools and failing septic systems.
- ▲ Reduce fertilizer and pesticide use.
- ▲ Reduce stormwater runoff by limiting paved surface areas and maintaining good vegetative cover.
- ▲ Pick up after your pets.
- ▲ Properly use, store, and dispose of hazardous products.
- ▲ Properly maintain motor vehicles and fuel storage tanks. Consider replacing underground storage tanks with properly contained above-ground tanks.
- ▲ Check all municipal laws that may apply.

### Farmers and Landowners: *Develop conservation plans on agricultural and forest lands that:*

- ▲ Reduce soil erosion, sediment, and stormwater runoff.
- ▲ Address proper nutrient, manure, pest, and irrigation water management.
- ▲ Address proper fuel storage and equipment maintenance.
- ▲ Conserve water, improve soil health, and protect surrounding natural resources.
- ▲ Check all federal and state laws that apply.

### Commercial and Industrial Businesses:

*Adhere to all laws, regulations, and recommended practices for:*

- ▲ Hazardous waste management
- ▲ Above- and underground storage tanks
- ▲ Wastewater discharge
- ▲ Floor drains
- ▲ Proper training for all employees
