Positive for COVID-19?

- **Stay home and isolate** away from others for at least 5 days. On day 6 you can leave isolation if your symptoms are improving and you don’t have a fever. After isolation, wear a high-quality, well-fitting mask for 5 more days when around others.

- **Contact your healthcare provider about treatment** for COVID-19 if you are eligible.

- **Tell your close contacts you are positive for COVID-19.** Close contacts who are up to date with COVID-19 vaccinations should monitor for symptoms and get tested 5 days after the last time they were with you. Close contacts who are not up to date should quarantine for 5 days and wear a mask for an additional 5 days.

- **Get vaccinated and stay up to date with your vaccines** once your symptoms go away and you’re fully recovered. This means getting a third dose and/or a booster dose, if you are eligible. People who have had COVID-19 and remain unvaccinated are more likely to get reinfected than those who got vaccinated after they were better.

To request support while in isolation, learn about treatment options, and report your close contacts to RIDOH, scan the QR code or go to portal.ri.gov/results.
