Stay up to date with your COVID-19 vaccines for the best protection against COVID-19. Being up to date means you have gotten all recommended doses of COVID-19, including a booster dose if you are eligible.

Everyone age 12 or older is eligible for a booster.

People can choose which vaccine type to get for their booster dose. However, CDC and RIDOH recommend getting an mRNA vaccine (Pfizer or Moderna). If you have questions about which booster dose is right for you, please talk to a healthcare provider.

If you got Pfizer or Moderna:

Get a COVID-19 booster dose at least **five months** after completing your primary series.

- If you are age 12 or 17, you must get Pfizer because that is the only COVID-19 vaccine authorized for use by people younger than age 18.

If you got Johnson & Johnson:

Get a COVID-19 booster dose at least **two months** after your primary COVID-19 vaccination.

Eligible Rhode Islanders can make appointments for booster doses through the options available at [C19VaccineRI.org](https://C19VaccineRI.org) or calling 2-1-1.
