What is Adolescent Health?

Adolescence (age 12-17) is a critical period of transition between childhood and adulthood. It includes the biological changes of puberty and development to adulthood. The behavioral patterns established during these developmental years can protect children or put them at risk for many different physical and behavioral health conditions. Older adolescents and young adults, including those with chronic health conditions, may face challenges as they transition from the pediatric to the adult healthcare system. This includes changes in their health insurance coverage and legal status. It may also include decreased attention to their developmental and behavioral needs. The Rhode Island Department of Health (RIDOH) strives to ensure that all adolescents and young adults receive timely, high-quality, culturally sensitive healthcare.

About the Data

Throughout this brief, data are presented as they were originally collected and reported for age, race and ethnicity, and sexual orientation and gender identity. RIDOH recognizes that these categories may not reflect how people and communities define themselves. We acknowledge these limits and strive to use language that is welcoming and inclusive of every Rhode Islander whenever possible.

Demographics

Figure 1

Race/Ethnicity of Adolescents in Rhode Island (age 15-24)

- White (Non-Hispanic): 64%
- Hispanic/Latinx: 20%
- Black (Non-Hispanic): 7%
- Asian (Non-Hispanic): 5%
- Other: 3%
- Native American (Non-Hispanic): 1%

**KEY FACTS**

**Based on the Most Recent Data Available for Rhode Island**

- **HPV vaccination** among male adolescents *more than tripled* from 2011 to 2017.¹⁰
- Rates of **chlamydia** and **gonorrhea** have increased by 25% and 133% respectively in the last five years among youth age 15-24.¹²
- **Nearly 1 in 3** high school students report currently using electronic vapor products.⁵,¹¹
- The four-year high school graduation rate *increased* from in the past 10 years.¹³
- The teen pregnancy rate is slightly lower in Rhode Island than in the US (18.8 per 1,000 women age 15-19).⁷
- Students with disabilities are more than twice as likely to feel *sad or hopeless* every day for at least two weeks compared to students without disabilities.⁵
- The combined **teen birth rate** in Rhode Island’s four core cities¹⁴ is more than three times higher than in the remainder of the state.⁷
- Lesbian, gay, or bisexual students are four times more likely to *attempt suicide* compared to heterosexual students.⁶

**HEALTH INEQUITIES**

**Based on the Most Recent Data Available for Rhode Island**

This section provides data on health inequities. Health inequities are systemic, avoidable, unfair, and unjust differences in health status across population groups.

RIDOH recognizes that the conditions in which people are born, grow, live, learn, work, and play affect health in powerful ways. Public health research and data show that many adverse health outcomes have resulted from generations-long social, economic, and environmental inequities. These inequities include poverty, discrimination, racism, and their consequences. For example, segregation in housing and education and racist mortgage lending and zoning policies have affected communities differently and have had a greater influence on health outcomes than genetics, individual choices, or access to healthcare.

Removing obstacles to health and improving access to good jobs with fair pay, quality education and housing, safe environments, and healthcare can help reduce health inequities and improve opportunities for every Rhode Islander.

14 Core cities are Rhode Island cities and towns where 25% or more of children are living below the federal poverty line. These include the cities of Providence, Pawtucket, Woonsocket, and Central Falls.

RIDOH would like to acknowledge the contributions of SISTA Fire for providing their time and feedback on the content and development of this publication. SISTA Fire is a small and growing network of women of color from across Rhode Island who are on a journey to create a space where they can build foundations for deep solidarity across differences, strengthen community connections, and create change in their lives and communities.
